

Unify Passive RFID-Based Tracking and Management of Moving Assets with Location-Based Process Automation

With KINEXON Platform, companies get a flexible, scalable system that connects identification and location data with IT systems to track assets, generate live events that optimize workflows, and enhance decision-making in production and logistics.

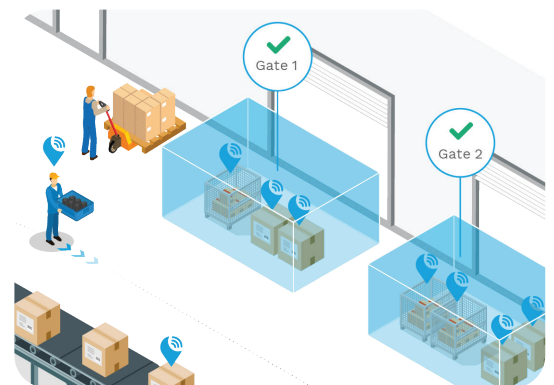

Elevate Efficiency through Precise Tracking of Assets and Production Orders

Use Cases

-  Goods Issue & Goods Receipt
-  Inventory Management
-  Process Flow Management

How to Track

- **Fixed RFID readers** for gate entries/exits and production workbenches
- **Mobile RFID readers** for checking inventory in large warehouse areas
- **Advanced RFID readers** with directionality and RTLS mode for logistics and production

Benefit from Location-Based Process Automation

- **Locate assets faster** with mobile tools
- **Visualize and manage** inventory stocks with real-time dashboards
- **Receive notifications** and documentation of dwelling time violations for asset movements and quantities
- **Reduce stockouts** and prevent overstocking in warehouses and production critical zones
- **Enhance space utilization and Identify bottlenecks** in crowded areas over time

Solution Impact

- 95%** reduction of manual bookings and scans to 3rd party systems
- 20%** decrease in equipment costs due to better utilization
- <1yr** fast payback with KINEXON Platform

KINEXON Platform – Leverage Event and Business Integration Capabilities to Automate Your Operations

As a unified platform for pRFID and location technologies, KINEXON Platform provides clear, customer-facing visualization features and integrates seamlessly with your existing IT landscape to eliminate outdated information, data silos, and legacy systems.

KINEXON Has Joined Zebra® PartnerConnect Program as an Independent Software Vendor

Integrating Zebra hardware with KINEXON Platform combines robust data capture (via pRFID, barcode, and mobile devices) with intelligent, location-based automation and visualization.

KINEXON helps customers improve the value per read by providing comprehensive functionality for event processing to monitor, optimize, and automate daily operations on the shop floor and in logistics.

Our Customers Succeed With Real-time Intelligence
